

nx27k

Datasheet

With our extensive experience in helping organizations implement the ISO 27001 standard, we now encapsulate all our know-how, templates, and techniques in an amazingly easy-to-use toolkit, that helps you adapt the standard to your organization. This toolkit helps you with the following: Create a scope document, with all the necessary required elements captured in a pre-defined customizable template

Featured Highlights

Complete security assessment lifecycle

With asset identification and classification exercise, you can develop your organization's IT infrastructure profile

Logical classification of assets

By creating hierarchical area enables you to logically classify your asset into business units each comprising of one or more assets.

Active directory enumeration

By providing AD username and password NX27K will enumerate all the user from the AD which can be made available to application.

"Eagle Eye" view of organization

Dashboard will give you an overall view of the risk assessment and mitigation to help you in taking correct risk treatment plans.

Security Metric

By specifying timely values you can have a look at the level of security going up or down.

Statement of Applicability

Automatically finds the controls from mitigation and generates the SOA.

More Highlights..

Email and Application alerts

On every action users gets an email and/or application alerts as per the settings done for alerts.

Perform task in stages

Once the risk is identified then user with higher level privileges can assign task to certain user and implementer can perform the task in several stages.

Access restriction for roles

Once all the roles are defined, application administrator can restrict / provide the access of the application for certain roles.

Role Management

Page level access can be implemented for specific roles

One click export

Most of the pages have one click export feature to minimize the time to generate the reports.

Key product components

Reports

More than 50 types of different report are available which gives lot of information about the asset, risk, etc.

Detailed search

One can also search for the specific term or string on assets, risk, mitigation and area.

Detailed log

Application provides the detailed log for every action performed, even failed logins.

Recycle Bin

In case of accidental deletion of most of the records can be restored from recycle bin. Until data is not deleted from recycle bin it will be still in the database for safety purpose.

Document Management System

There are two ways to manage your documents. One in the application and other is using WSS 3.0 with versioning and approval workflow.

Areas where NX27K Suite benefits

Minimum system requirements

System Requirements	Minimum
Operating System	Microsoft Windows Server 2003, Microsoft Windows Vista, Microsoft Windows 7, Microsoft Windows Server 2008.
Browser	Internet Explorer 6.0 or higher
Browser Add-in	Silverlight 3.0
Processor	1GHz and higher.
RAM	1GB RAM
Disk space	250MB or more free disk space
Networking	Network connectivity to application
Back End Database	Microsoft SQL Server 2005, Microsoft SQL Server 2005 Express Edition, or higher
Web server	Internet Information Server (IIS)
